(d) Impacts of modern technology on the life
(e) Importance of learning English knowledge in the nursing field
(f) Impacts of COVID-19 in India.

VI Long Essay (Any One)

1×10=10

- (a) Read the following passage carefully and answer the questions briefly

Diabetes mellitus is a chronic metabolic disease that affects the metabolism of fats, carbohydrates and proteins. Diabetes occurs in children in different variations including type-1 diabetes mellitus (IDDM), type 2 diabetes mellitus (NIDDM), maturity onset diabetes of the young (MODY) and neonatal diabetes (NDM). Type 1 is the most common among children. NIDDM can be referred to as insulin receptor resistance at its early onset, though there is gradual loss of insulin production with time. Symptoms that a patient presents with include polyuria, polydipsia, polyphagia, and weight loss. Diabetic ketoacidosis (DKA) is one of the acute complications with both type 1 and type 2 diabetes mellitus. Cerebral edema can occur due to DKA is uncommon. It usually occurs spontaneously and can be identified by CT scan of the brain.

- (1) What is the most common type of diabetes mellitus in children?
- (2) What are all the classical symptoms of diabetes mellitus?
- (3) What is the acute complication of diabetes mellitus?
- (4) How do you identify the cerebral edema?
- (5) What is the expansion of DKA?

OR

- (b) Make a precise of the following passage and suggest a suitable title

Overpopulation is indeed a growing concern in the developing world, causing many of the planet's environmental problems. Although an increasing population does have a negative impact on the environment to an extent, the greatest problem is in fact caused by the way in which humans choose to live their lives. In the following essay, both these ideas will be discussed. Overpopulation does have a serious impact on the world's environment for several reasons. An increase in population means more pollution, caused by more cars on the road, more factories, more farming

and more household chemicals. Pollution is a significant environmental issue and it can have a serious effect on human and animal health. Overpopulation also means that natural resources are decreasing more rapidly. The modern world is consuming more than it can produce. People are continuously buying more products and building more houses. Fresh water, oil and natural gas are just some of the resources which are in demand.

Perhaps overpopulation would not be an issue, however, if society changed the way in which it lived. For example, in order to help these environmental problems, people could try to save natural resources by using less water or by consuming fewer products. They could also try to reuse or recycle more. Pollution could also be kept to a minimum if people only bought organic food or tried to use their cars less. In summary, although overpopulation is a significant problem when considering the environment, it would be less of an issue if people made certain changes to their daily lifestyle.
